

S4 Fig. *N. benthamiana* transgenic plants expressing ORF5 proteins. Western blot detection of ORF5_{CY2} and ORF5_{OULV}. CY2 is the closest related ORF5-expressing ULV to CY1 and OULV is the least related of the dicot-infecting ULVs. Total proteins were isolated from heterozygous T1 plants and subjected to 10% denaturing PAGE. Primary antibody was developed in rabbits against peptide SLVRETYIPSTTTGKE. ORF5 proteins are migrating as dimers under the conditions used.
